

RABQSA launches updated requirements for the AS9100 and AS9110 Aerospace Certification Schemes

Milwaukee, USA; RABQSA International, Inc (RABQSA) is officially launching the updated requirements for its existing Aerospace-based AS9100 and AS9110 Auditor Certification Schemes.

The Certification Requirements have been updated to reflect the international Aerospace Auditor and Training Provider requirements of the AS9104/3 Standard. The Standard replaced the Americas-specific requirements that previously guided the certification of aerospace auditors.

"RABQSA has been very involved in the development of the international requirements, and we are pleased to be able to continue that involvement," said Shanya Salamaca, Executive Director The Americas. "The updating of our certification requirements falls in line with the implementation deadlines established by the International Aerospace Quality Group (IAQG)."

All the auditor certification requirements have been placed into RABQSA's updated, easy-to-follow certification document format. Applications may be submitted directly online or via an editable PDF that can either be emailed or printed and mailed in hard-copy format.

RABQSA continues to participate as a liaison member to the Americas Aerospace Quality Group Registration Management Committee (AAQG RMC).

Further details on the AS9100 and AS9110 Certification Schemes are available on the RABQSA website at www.rabqsa.com or by contacting the RABQSA Aerospace Scheme Examiner at info@rabqsa.com.
