RABQSA Releases New Aerospace AS9110 Certification Scheme

Milwaukee, USA and Sydney, Australia – RABQSA International (RABQSA) has today announced the release of the AS9110 Aerospace Auditor Certification Scheme in agreement with ANSI-ASQ National Accreditation Board (ANAB) and Americas Aerospace Quality Group (AAQG).

RABQSA will establish and maintain the approval and/or certification of auditors who conduct AS9110 management system audits of Aerospace Repair, Overhaul and Maintenance Facilities. The certification scheme is managed in conjunction with the Registrar Management Committee (RMC), a sub committee of the AAQG, and in support of the industry's management system standard, encouraging industry to adopt a management system that is subject to third-party audits.

“RABQSA is proud to be selected by ANAB to administer this scheme” said RABQSA CEO, Michael Carmody. “The release of the Aerospace Certification Scheme marks a further addition to the innovative and expansive RABQSA product portfolio, and continues to reinforce the realization of the added value and relevance of competency based personnel certification to industry” said Carmody.

RABQSA International currently offers both AS9110 Auditor Approval and AS9110 Auditor Certification.

This is a progressive step for RABQSA International as industry groups and associations throughout the world reinforce their confidence in accredited personnel and training certification.

For further information regarding the Aerospace AS9110 Certification, please contact Ms. Monique Inman on minman@rabqsa.com or +414 272 3937.

RABQSA International, a non-profit (not-for-profit) organization, is one of the world's leading certification organizations for the provision of accredited personnel and training certification, and professional development services. A wide variety of businesses employ our certified persons for the purposes of improving business performance.
